Tool set for M8 - M9 - M10 glow plugs removal with slide hammer

**UNIVERSAL
M8-M9-M10**

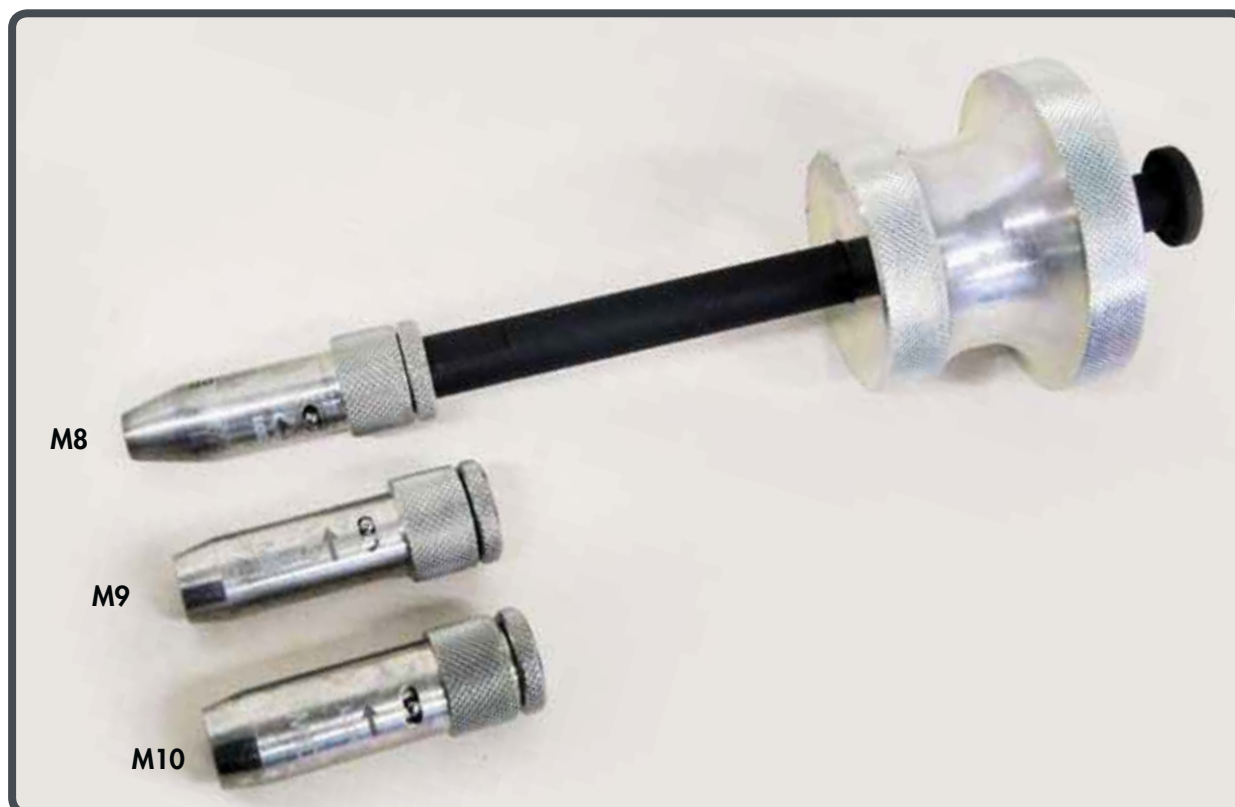

**SOLUTION FOR BLOCKED AND
DEFORMED GLOW PLUGS**

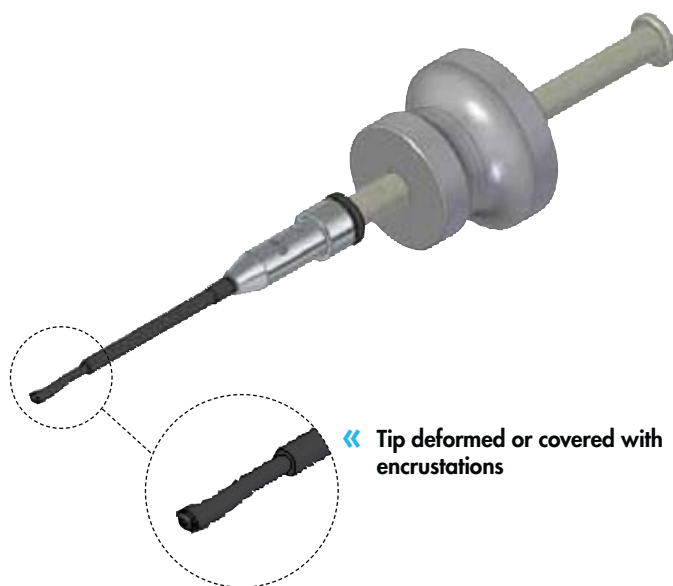

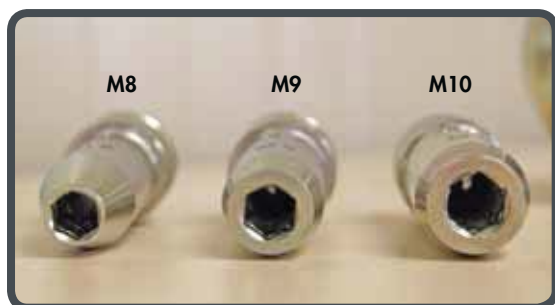

Complete kit

311 189 000

-  ▶ Indispensable solution to remove glow plugs stuck in their seat.
-  ▶ Glow plugs in modern CRs are highly stressed and also used as "hot spots" not only when the vehicle starts (e.g.: to reduce emissions to a minimum or to reduce the wear of the catalyst and, if present, the DPF). As such, the glow plugs remain lit much longer while heating, for the reasons outlined above.
- ▶ Since modern glow plugs are increasingly fragile and narrow, a glow plug that has been burnt out for a long time often gets stuck in its seat. Even if you try to unscrew it, it will not come out due to encrustation along its body and also because of deformation which occurred over time in the final part.
-  ▶ This system quickly and directly grips the hex body of all types of M8-M9-M10 glow plugs.
- ▶ Features the innovative fast lock system that ensures maximum quickness.
- ▶ Does not damage the cylinder head and guarantees a job done to professional standard.
- ▶ Removal through the strokes of the slide hammer provided.

Tool set for glow plugs

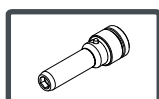

EXAMPLE OF USE

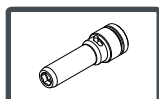

Components

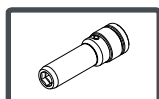

311189001 Glow plug extractor M8

311189005 Glow plug extractor M9

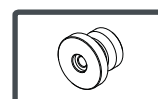

311189008 Glow plug extractor M10

Components

313201004 Slide hammer

313201006 Extension pin for extraction hammer
